The Dawson Group
Kamloops, BC

**Re: Co-op Winter 2027 AI Developer Intern**

Dear Hiring Team,

I am writing to apply for the Co-op Winter 2027 AI Developer Intern position at The Dawson Group. As a third-year Computing Science co-op student at Thompson Rivers University based right here in Kamloops, I'm drawn to the chance to find and automate real operational friction for a company with a century of history in this region, and the timing lines up well: my current co-op term with the City of Merritt wraps up in December, right before this role's January start.

At InferenceSaver, I co-founded and built a production AI API gateway providing unified access to language, image, video, music, and voice models for 129 registered users, including the backend workflows, model integrations, and payment infrastructure behind it. I also diagnosed and fixed a Stripe idempotency defect affecting real production checkouts, the kind of evaluate-and-fix discipline this role's focus on measurable, monitored AI workflows calls for.

At BecomeAfish, I automated eight operational workflows end to end (payroll batching, reconciliation, notifications) and built AI-assisted content and SEO tooling, direct experience turning business processes into working automation rather than just prototypes. I'm also a daily user of Claude Code for AI-assisted development, including writing and reviewing production prompts and agent workflows.

I would welcome the opportunity to discuss how my hands-on experience building and operating production AI systems could contribute to your team.

Thank you for considering my application.

Sincerely,

**Mandeep Singh**
