Re: Co-op Winter 2027 Systems Developer Intern

Dear Hiring Team,

I am writing to apply for the Co-op Winter 2027 Systems Developer Intern position at The Dawson Group. As a third-year Computing Science co-op student at Thompson Rivers University based right here in Kamloops, I'm drawn to the chance to build internal tools for a company that's been part of this region's infrastructure for a century, and the timing lines up well: my current co-op term with the City of Merritt wraps up in December, right before this role's January start.

At BecomeAfish, I built and launched a production booking and payments platform on Next.js, TypeScript, and PostgreSQL, deployed on Vercel, supporting 108 registered accounts and 133 scheduled lessons. I engineered geographic matching, role-based portals, and automated eight operational workflows end to end, the same shape of work this role describes: shipping features real users depend on, backed by a documented, reliable data layer.

As Systems Analyst Intern with the City of Merritt, I've managed 163 assigned IT tickets and built a full CityWide REST API runbook through hands-on curl and PowerShell testing, giving me a working sense of how field and office operations actually run, directly relevant to building tools for operations staff rather than just other developers. I'm also a daily user of Claude Code for AI-assisted development.

I would welcome the opportunity to discuss how my hands-on experience with this exact stack, and my background bridging operations and engineering, could contribute to your team.

Thank you for considering my application.

Sincerely,

Mandeep Singh
