Botpress
Montreal, QC

Re: Stagiaire en developpement logiciel (Hiver 2027) / Software Developer Intern

Dear Hiring Team,

I am writing to apply for the Winter 2027 Software Developer Intern position at Botpress. Building customer-facing features and integrations for an AI agent platform is directly in line with what I build, and I would be excited to do it in Montreal.

At InferenceSaver, I co-founded a production AI gateway in TypeScript and React that integrates language, image, video, music, and voice models, reaching 2.7K active site users. I built authentication, billing, and backend workflows, and implemented retry-safe webhook processing after diagnosing a payment defect affecting live transactions.

I contribute to AgentMemory, an open-source TypeScript and Node.js memory layer for AI agents with 29.7K+ GitHub stars, where I shipped tested integration fixes. At the Convex Hackathon, I co-built Log by ListeningKit, contributing 70+ commits across APIs, MCP tooling, browser integrations, and analytics. Writing unit and end-to-end tests, adding tracking, and documenting features are a normal part of how I ship.

I would welcome the opportunity to build integrations that connect Botpress agents to the systems your customers depend on. Thank you for considering my application.

Sincerely,

Mandeep Singh
