Re: AI Scientist Co-op

Dear Hiring Team,

I am writing to apply for the AI Scientist Co-op with CIBC's Advanced Analytics and AI team. Taking models from experimentation through to deployment on platforms like Databricks and Azure is the part of AI work I find most rewarding, because it is where careful engineering decides whether a good idea creates value.

At InferenceSaver, I co-founded a production AI gateway and multimodal generation platform that reached 2.7K active site users and 43K tracked events in 2026. I integrated language, image, video, music, and voice models, and handled the unglamorous production details: retry-safe payment writes after diagnosing an idempotency defect affecting 8 of 14 checkouts, and restoring integrations behind 88 production generation jobs.

I contribute to AgentMemory, an open-source semantic memory layer for AI agents with 29.7K+ GitHub stars, where I shipped tested integration fixes, and I built Generic Alternatives, which uses PostgreSQL, Docker, and background job queues for structured data processing. These projects strengthened my Python, SQL, data-pipeline, and Git fundamentals, and I am eager to deepen my Spark and Kubernetes skills on CIBC's platforms.

Combined with my City of Merritt co-op, where I work inside enterprise access-management and change processes, I bring both applied AI experience and respect for operating in a regulated environment. Thank you for considering my application.

Sincerely,

Mandeep Singh
