Re: AI App & Tool Development Intern (Winter 2027, 8 Months)

Dear Hiring Team,

I am writing to apply for the AI App & Tool Development Intern position with Dayforce's Application Advisory team. The brief to find high-friction work, understand it, and build technology that makes it better describes exactly how I like to work, and the goal of cutting release smoke-testing effort by more than half is a problem I have already started solving in my own projects.

I built Preflight, a multimodal launch scanner that combines source-code context, Playwright-driven DOM audits, and responsive screenshots, then uses Amazon Nova models to flag visual, routing, and performance issues and produce remediation checklists. It is effectively an AI-assisted smoke test, and it taught me where LLMs genuinely reduce manual QA effort and where deterministic checks must stay in charge.

At InferenceSaver, I co-founded a production AI gateway that reached 2.7K active site users, integrating language, image, video, music, and voice models behind authentication, billing, and API workflows. At BecomeAfish, I automated eight operational workflows for payroll batching, reconciliation, and notifications. I also contribute to AgentMemory, an open-source memory layer for AI coding agents, giving me hands-on experience with retrieval and agentic patterns.

My City of Merritt co-op adds the other half of the job: sitting with the people who use the tools. Across 163 IT tickets and a CityWide REST API runbook I wrote from curl and PowerShell testing, I learned to translate messy workflows into precise requirements. I would welcome the chance to prototype, measure, and iterate on tools for your consultants. Thank you for considering my application.

Sincerely,

Mandeep Singh
