Re: Software Engineer Co-op (Summer 2027 - 8 Months - Sports Technology)

Dear Hiring Team,

I am writing to apply for the Software Engineer Co-op with EA SPORTS' Advanced Technology Group in Vancouver. Building shared technology for user-generated content and creation pipelines, then integrating it into live game teams on Frostbite, is the kind of cross-team engineering I want to learn.

I built PromptLine, a Rust CLI using Tokio for asynchronous, concurrent streaming, where I had to reason carefully about ownership, threading, and latency. I also built SyntaxArk, a browser IDE that uses Web Workers to keep editing and execution responsive, which gave me practical experience profiling and fixing performance problems. I am eager to apply that systems mindset in C++.

At InferenceSaver and BecomeAfish, I ship and maintain production software end to end, including integrating media-generation pipelines for image, video, music, and voice, and debugging failures under real load. I bring JavaScript and TypeScript, automated testing, and a strong willingness to deepen the geometry and linear algebra behind 3D transformations.

I would welcome the opportunity to help improve load times, frame rates, and creation tools for EA SPORTS players. Thank you for considering my application.

Sincerely,

Mandeep Singh
