Genesys
Toronto, ON (Hybrid)

Re: Web Software Developer Intern (WFM)

Dear Hiring Team,

I am writing to apply for the Web Software Developer Intern position on Genesys Cloud Workforce Management. Building responsive web interfaces and cloud services that schedule and support contact-centre teams at global scale is product engineering I would be proud to contribute to, and I am available for a term beginning May or June 2027.

At BecomeAfish, I built a scheduling-heavy booking and payments platform in TypeScript, React, and PostgreSQL, supporting 108 accounts and 133 scheduled lessons, with instructor matching, role-based portals, payroll batching, and eight automated workflows. Scheduling, availability, and payroll logic map closely to the problems WFM solves.

I also built SyntaxArk, a browser IDE with real-time collaboration and careful client state management, and co-built Log by ListeningKit at the Convex Hackathon. At InferenceSaver, I build product interfaces and backend workflows, write tests, and debug production issues. I work in Java as well as TypeScript, and I am eager to learn Clojure and deepen my AWS skills.

I value peer review and agile practice, and I care about usability and maintainable code. Thank you for considering my application.

Sincerely,

Mandeep Singh
