Re: Co-op Researcher - Agentic AI

Dear Hiring Team,

I am writing to apply for the Co-op Researcher position in Agentic AI at Huawei's Noah's Ark Lab. Building agents that explore and adapt to new environments with very few interactions is a problem I find compelling, and I would value contributing engineering strength to a team running large-scale experiments on it.

I contribute to AgentMemory, an open-source persistent memory layer for AI coding agents with 29.7K+ GitHub stars, where I shipped tested integration fixes in a codebase spanning session recording, workspace context, and semantic retrieval. I also built PromptLine, a Rust CLI with asynchronous multi-provider streaming and terminal-native agent workflows, which taught me how agent loops fail and how to instrument them.

At InferenceSaver, I co-founded a production platform integrating language, image, video, music, and voice models for thousands of site users. Diagnosing intermittent failures there, including an idempotency defect affecting 8 of 14 checkouts, built the habit of designing careful experiments, isolating variables, and writing up what I found.

I am strongest in Python and TypeScript engineering, and I am actively deepening my PyTorch and reinforcement-learning foundations. I would welcome the opportunity to support your researchers with reliable pipelines, evaluations, and analyses. Thank you for considering my application.

Sincerely,

Mandeep Singh
