Re: Co-op Researcher - LLM Post-Training & Agentic Coding

Dear Hiring Team,

I am writing to apply for the Co-op Researcher position in LLM Post-Training & Agentic Coding at Huawei Canada. Your interest in terminal, repository-level, and software-engineering environments for agents matches the tools I have been building, and I would like to contribute to the infrastructure that makes that research fast and reliable.

I built PromptLine, a Rust and Tokio CLI for terminal-native coding-agent workflows with asynchronous multi-provider streaming, permission-aware file operations, and encrypted key storage. I also contribute to AgentMemory, an open-source memory layer used by Claude, Cursor, Copilot, and Codex agents, where I shipped tested integration fixes. Both projects gave me a practical view of where coding agents succeed, where they fail, and how to observe that.

At InferenceSaver, I co-founded a production AI gateway serving language and multimodal models with 43K tracked events in 2026, so I am comfortable with inference APIs, rollout reliability, and debugging distributed failures. I bring strong Python, TypeScript, and Rust engineering, and I am actively building my PyTorch and post-training knowledge in SFT, preference optimization, and RL.

I would welcome the opportunity to own well-scoped infrastructure for agent rollout, evaluation, and synthetic task generation while learning from your researchers. Thank you for considering my application.

Sincerely,

Mandeep Singh
