Hiring Team
Muniworth
Victoria, BC

Re: Computer Science Co-op

Dear Hiring Team,

I am writing to apply for the Computer Science Co-op at Muniworth. I currently work inside a municipality as a Systems Analyst co-op at the City of Merritt, so I have seen first-hand how much municipal finance and operations teams depend on clean data and dependable tools. Building ML and LLM pipelines for that audience is a mission I connect with directly.

At InferenceSaver, I co-founded a production AI gateway integrating language and multimodal models, with 43K tracked events in 2026. I write type-safe TypeScript and Python and handle the reliability work that production AI needs, including retry-safe writes after diagnosing an idempotency defect affecting live transactions.

I contribute to AgentMemory, an open-source memory layer for AI agents built on semantic retrieval, which gave me practical exposure to RAG-style context assembly. I also built Generic Alternatives, with PostgreSQL, Docker, and background job queues for structured data ingestion and supplier matching. I am eager to deepen my Hugging Face, PyTorch, and Azure AI Foundry skills under your Lead Engineer.

At the City of Merritt, I documented a CityWide REST API through hands-on testing and supported staff across 163 tickets, so I understand the users and data at the other end of your pipelines. I would welcome an 8-month or longer term starting in January. Thank you for considering my application.

Sincerely,

Mandeep Singh
