Rivian and Volkswagen Group Technologies
Vancouver, BC

Re: Software Engineering Intern - Applications, Infotainment & Mobile (January - August 2027)

Dear Hiring Team,

I am writing to apply for the Software Engineering Intern position on the Applications, Infotainment & Mobile teams at Rivian and Volkswagen Group Technologies. Building the software a driver touches every day, from media and navigation to connectivity and updates, is customer-facing engineering at its most demanding, and I am available for the full January 11 to August 13, 2027 term.

I have shipped two production applications as a co-founder. At BecomeAfish, I built a booking and payments platform with role-based portals and geographic matching, supporting 108 accounts and 133 scheduled lessons. At InferenceSaver, I built product interfaces and backend workflows for a multimodal AI platform, integrating music and voice models and restoring integrations behind 88 production generation jobs.

Beyond web stacks, I built PromptLine, a Rust CLI with asynchronous streaming and permission-aware file operations, and SyntaxArk, a browser IDE with terminal integration, Web Workers, and real-time collaboration. These taught me to reason about concurrency, state, and responsiveness, which carry directly into in-vehicle applications. I work in Java and Python and am keen to build in Kotlin and Android Automotive.

Coursework in computer networks and operating systems and my City of Merritt systems work support the wireless, telematics, and integration-testing side of the role. I would welcome the opportunity to contribute wherever the team matches me. Thank you for considering my application.

Sincerely,

Mandeep Singh
