Re: AI Solutions Specialist - Co-op Student (Winter 2027)

Dear Hiring Team,

I am writing to apply for the AI Solutions Specialist Co-op at Rodan Energy Solutions. Building, testing, and supporting AI agents and automations that connect to real company systems, then teaching colleagues to use them well, is a combination of engineering and enablement I genuinely enjoy.

At InferenceSaver, I co-founded a production AI gateway that reached 2.7K active site users, integrating multiple language and multimodal models behind authentication and billing. At BecomeAfish, I automated eight workflows covering payroll, reconciliation, notifications, and AI-assisted newsletter publishing. I also contribute to AgentMemory, an open-source memory layer for AI coding agents, so I understand how agents use context and tools in practice.

My City of Merritt co-op is a Microsoft 365 environment where I handle identity, access, and application support across 163 tickets. I wrote a CityWide REST API runbook through hands-on testing, which is the same discipline needed to integrate Copilot Studio or Azure AI with internal data sources responsibly and to document it for others.

I take AI governance seriously: knowing which data an agent may touch, testing outputs before rollout, and writing training material people actually read. I would welcome the opportunity to help Rodan scale AI across departments this winter. Thank you for considering my application.

Sincerely,

Mandeep Singh
