Re: Software Developer Intern - Server (May 2027 - 12 Months)

Dear Hiring Team,

I am writing to apply for the 12-month Software Developer Intern - Server position at SOTI. Working on cloud, middle-tier, and database software behind an enterprise mobility management platform appeals to me because I manage devices at my current co-op and build backend systems in my own products.

At BecomeAfish, I designed the PostgreSQL schema and backend for a booking and payments platform supporting 108 accounts and 133 scheduled lessons, including Stripe webhooks, role-based access, and eight automated workflows. At InferenceSaver, I built backend workflows and diagnosed an idempotency defect affecting 8 of 14 checkouts, then implemented retry-safe database writes.

I also built Generic Alternatives on PostgreSQL, Docker, and background job queues, and SyntaxArk, which required careful data models for projects, files, and shared sessions. I write Java, TypeScript, Python, and SQL with strong data-structure and algorithm fundamentals, and I am keen to learn C#, Angular, and stored-procedure work in SOTI's stack.

As a Systems Analyst co-op at the City of Merritt, I handle device deployment, BitLocker, and identity management, so I understand the administrators who rely on EMM servers every day. Thank you for considering my application.

Sincerely,

Mandeep Singh
