Re: Software Engineering Intern/Co-op (Canada) - Summer 2027

Dear Hiring Team,

I am writing to apply for the Software Engineering Intern/Co-op position at TELUS Digital for Summer 2027. Working beside researchers and designers on real client projects is how I like to build, because the best products come from engineers who care about the people using them.

At BecomeAfish, I designed and launched a booking and payments platform in Next.js, TypeScript, and PostgreSQL that supports 108 accounts and 133 scheduled lessons, with role-based portals, Stripe webhooks, and eight automated workflows. At InferenceSaver, I built product interfaces for a multimodal AI platform that reached 2.7K active site users in 2026.

I also built SyntaxArk, a browser IDE with multi-file editing, a terminal, and real-time collaboration, and co-built Log by ListeningKit at the Convex Hackathon. AI is part of how I work every day: I use coding agents in my workflow and contribute to AgentMemory, an open-source memory layer for them, so I know where AI speeds delivery and where careful review is still needed.

I have an eye for design detail and a strong commitment to code quality. I would welcome the opportunity to deliver digital experiences for TELUS Digital's clients this summer. Thank you for considering my application.

Sincerely,

Mandeep Singh
