Hiring Team
Trimble Applanix
Richmond Hill, ON

Re: Automated Test Engineering Intern (16-Month Internship)

Dear Hiring Team,

I am writing to apply for the Automated Test Engineering Intern position at Applanix, a Trimble company. Building automated web UI test frameworks and wiring them into CI pipelines is work I have already done on my own projects, and I am excited to apply it to navigation and simulation systems over a 16-month term.

I built Preflight (github.com/deepmroot/preflight), a launch scanner that uses Playwright to drive DOM audits and responsive screenshots across routes, then combines that evidence with source context to report visual, routing, and performance issues. It taught me to design stable selectors, deterministic waits, and readable failure reports, which are the details that decide whether a UI suite is trusted.

I also built SyntaxArk, a browser IDE with real-time collaboration, terminal integration, and Web Workers, so I understand the asynchronous behaviour that makes UIs hard to test. At InferenceSaver and BecomeAfish, I ship TypeScript and Python services with CI/CD, scheduled jobs, REST APIs, and webhook processing, and I debug production failures end to end.

My public repositories are at github.com/deepmroot. I would welcome the opportunity to build reliable test infrastructure for your navigation products. Thank you for considering my application.

Sincerely,

Mandeep Singh
