Hiring Team
Trimble Applanix
Richmond Hill, ON

Re: Software Engineering Intern (16 Months, May 2027)

Dear Hiring Team,

I am writing to apply for the 16-month Software Engineering Intern position at Applanix, a Trimble company. Developing real-time software for positioning products, implementing algorithms, and analyzing the data that proves they work is the kind of rigorous engineering I want to grow into, and a 16-month term would let me contribute meaningfully.

I built PromptLine, a Rust CLI using Tokio for asynchronous streaming, with careful attention to concurrency, error handling, and performance. That project, together with operating systems and computer networks coursework, gave me a systems mindset that I am eager to apply in C and C++ on embedded targets. I use Python for scripting, data processing, and analysis across my projects.

At InferenceSaver and BecomeAfish, I debug and maintain production software end to end, from tracing a payment defect affecting 8 of 14 checkouts to building data-processing workflows on PostgreSQL. I am comfortable with Git, issue tracking, and agile delivery, and I enjoy organizing data so results are reproducible. Your web interface work also matches my HTML, CSS, and JavaScript experience.

I am genuinely interested in GNSS, inertial, and geospatial technology, and would welcome the chance to learn it from your team. Thank you for considering my application.

Sincerely,

Mandeep Singh
