Hiring Team
Hitachi Rail (Software Analyst)
Toronto, ON

Re: Software Analyst Intern (Winter 2027, 8-12 months)

Dear Hiring Team,

I am writing to apply for the Software Analyst Intern position at Hitachi Rail. I am especially drawn to the combination of software development, engineering analysis, test automation, and dependable urban transit technology.

At BecomeAfish and InferenceSaver, I have built and operated production TypeScript, Python, API, authentication, and payment workflows used by real customers. I also diagnosed a Stripe idempotency defect affecting live checkouts and implemented retry-safe writes, reinforcing the disciplined testing and root-cause analysis this role requires.

My City of Merritt systems internship adds enterprise troubleshooting and documentation experience: I have managed 163 assigned tickets and developed a REST API runbook through curl and PowerShell testing. I am comfortable learning unfamiliar systems, documenting test procedures, and working methodically with source control and CI/CD.

I would welcome the opportunity to contribute that reliability-focused approach to Hitachi Rail's software team. Thank you for considering my application.

Sincerely,

Mandeep Singh
