Re: Software Engineer Intern (Winter 2027)

Dear Hiring Team,

I am writing to apply for HeyGen's Software Engineer Internship for Winter 2027. I am excited by the opportunity to work from frontend experiences through backend APIs to AI models on a product that makes visual storytelling more accessible.

At InferenceSaver, I co-founded an AI API gateway and multimodal generation platform serving 129 users, integrating language, image, video, music, and voice models alongside authentication, billing, and product interfaces. This gives me direct experience turning AI capabilities into reliable user-facing workflows.

At BecomeAfish, I built and launched a TypeScript, React, and PostgreSQL product used by real customers, including role-based portals and eight automated workflows. I am comfortable with REST APIs, Python, cloud deployment, performance debugging, and collaborating around product outcomes.

I would welcome the opportunity to contribute hands-on AI product and full-stack experience to HeyGen's Toronto engineering team. Thank you for considering my application.

Sincerely,

Mandeep Singh
