Re: Software Engineering Intern (January 2027)

Dear Hiring Team,

I am writing to apply for the Software Engineering Internship at Kepler Communications beginning January 2027. The chance to build backend services and automation used by satellite operations and mission-control teams is a compelling next step from my production software work.

At InferenceSaver, I co-founded and operate an AI API gateway with backend workflows, model integrations, authentication, payments, and production monitoring for 129 users. At BecomeAfish, I built PostgreSQL-backed services and automated eight operational workflows end to end.

My experience includes Python, TypeScript, REST APIs, SQL, Docker, Linux, Git, testing, and technical documentation. I have diagnosed failures across live distributed workflows and implemented durable fixes where reliability and clear operational behaviour mattered.

I would welcome the opportunity to apply that backend and operations mindset to Kepler's satellite network infrastructure. Thank you for considering my application.

Sincerely,

Mandeep Singh
