Re: Software Development Co-op Student (Winter 2027)

Dear Hiring Team,

I am writing to apply for the Software Development Co-op Student position at TechInsights. The role's breadth across architecture, proof-of-concepts, React interfaces, backend systems, Infrastructure as Code, observability, and live DevOps support strongly matches how I have learned to build software.

At BecomeAfish, I designed and launched a production SaaS platform on TypeScript and PostgreSQL, including role-based interfaces and eight automated workflows. At InferenceSaver, I operate AI integrations, backend workflows, payments, telemetry, and production debugging for a platform serving 129 users.

I have experience moving from ambiguous requirements to technical designs, validating risky approaches, documenting systems, and supporting high-severity issues. My City of Merritt work adds structured enterprise troubleshooting and stakeholder communication.

I would welcome the opportunity to contribute as technical glue across TechInsights' architecture and development teams while growing under senior engineers. Thank you for considering my application.

Sincerely,

Mandeep Singh
