Hiring Team

Atlassian

Burnaby / Vancouver / Richmond, BC

Re: Software Engineer Intern

Dear Hiring Team,

I am excited to apply for the Software Engineer Intern position at Atlassian. As a third-year Computing Science co-op student at Thompson Rivers University, I have spent the past year building and operating production software products, and Atlassian's mission of unleashing the potential of every team is one I have already been living out through my own co-founded platforms.

As Co-Founder and Technical Lead at BecomeAfish, I built a full booking and payments platform supporting over 100 registered accounts, including role-based portals, automated workflows, and Stripe integrations. At InferenceSaver, I co-developed a production AI API gateway serving 129 users, building authentication, billing, and affiliate systems while resolving a critical payment idempotency defect — experience directly relevant to building resilient, collaboration-focused software at scale.

My time as Systems Analyst Intern with the City of Merritt also gave me strong grounding in supporting real users: I managed 163 IT tickets, handled 87 onboarding/offboarding cases, and documented a full REST API runbook, all of which sharpened my ability to communicate clearly and solve problems methodically — skills I know matter as much as code at Atlassian.

I would welcome the opportunity to discuss how my full-stack and backend experience can contribute to your engineering team this Winter 2027 term.

Thank you for considering my application.

Sincerely,

Mandeep Singh
