Hiring Team  
Lyft  
Montreal, QC

## Re: Backend Intern

Dear Hiring Team,

I am writing to apply for the Backend Intern position at Lyft for Summer 2027 in Montreal. As a Computer Science co-op student in Canada, I bring hands-on experience building and operating backend systems in production, and I am drawn to Lyft's mission of connecting people through reliable, real-time technology.

As Co-Founder and Software Engineer at InferenceSaver, I built the backend workflows, authentication, and model-integration layer for a production AI API gateway serving 129 registered users, including diagnosing and fixing a payment-processing idempotency defect through careful testing and retry-safe writes — the kind of reliability-first backend engineering this role calls for. At BecomeAfish, I designed the PostgreSQL-backed booking and payments system and automated eight backend workflows spanning payroll batching, reconciliation, and notifications.

I have also been an active contributor to AgentMemory, an open-source persistent memory layer for AI coding agents that has grown to over 28,000 GitHub stars, giving me real experience collaborating in a live open-source codebase. My internship with the City of Merritt further sharpened my systems troubleshooting, including documenting a full REST API runbook through direct testing.

I would welcome the opportunity to bring that backend and database experience to Lyft's Montreal team this Summer 2027.

Thank you for considering my application.

Sincerely,

**Mandeep Singh**
