Hiring Team
Trench Group
Scarborough, ON

Re: AI & ML Developer Intern

Dear Hiring Team,

I am writing to apply for the AI & ML Developer Intern position at Trench Group, supporting Project NOVA. As a third-year Computing Science co-op student at Thompson Rivers University, I have spent the past year building and operating production AI and full-stack systems as a startup co-founder, and I would welcome the chance to bring that combination of AI-platform engineering and full-stack ownership to Trench's leadership-facing initiatives.

As Co-Founder and Software Engineer at InferenceSaver, I co-developed a production AI API gateway that unifies access to language, image, video, music, and voice models for 129 registered users, building the backend workflows, authentication, and model integrations end-to-end, and diagnosing and fixing a payment-processing defect that was silently affecting live users — the kind of careful, end-to-end ownership Project NOVA calls for.

At BecomeAfish, I built a full booking and payments platform using Next.js, TypeScript, and PostgreSQL, and automated eight operational workflows spanning payroll batching, reconciliation, and notifications, along with campaign analytics tooling — direct experience with the kind of data pipeline and stakeholder-reporting work this role asks for.

My internship with the City of Merritt has sharpened a complementary skill: translating between technical systems and the people who rely on them, including managing IT tickets across a large user base and authoring a full CityWide REST API runbook — practice in the clear, cross-functional communication Project NOVA will need as it scales across departments.

I would welcome the opportunity to discuss how my AI-platform and full-stack experience can contribute to Project NOVA this term.

Thank you for considering my application.

Sincerely,

Mandeep Singh
