Visier Solutions
Vancouver, BC

Re: Software Developer Co-op

Dear Hiring Team,

I am writing to apply for the Software Developer Co-op position at Visier Solutions in Vancouver. As a third-year Computing Science co-op student at Thompson Rivers University, I have spent the past year building and shipping full-stack production software — from payments infrastructure to AI-powered platforms — and I would welcome the chance to bring that experience to Visier's people-analytics products.

As Co-Founder and Technical Lead at BecomeAfish, I built a booking and payments platform from the ground up using Next.js, TypeScript, and PostgreSQL, handling everything from database design to Stripe webhook integrations and automated reconciliation workflows. At InferenceSaver, I co-developed a production AI API gateway serving 129 registered users, including diagnosing and fixing a payment-processing idempotency defect — the kind of careful, data-integrity-minded engineering that matters in enterprise software.

My internship with the City of Merritt gave me additional grounding in enterprise systems: I documented REST API workflows, managed IT tickets across a large user base, and worked directly with access management and identity systems. Combined with my software development work, I bring both the engineering skill and the operational discipline this role calls for.

I would welcome the opportunity to discuss how my full-stack and backend experience can contribute to Visier's engineering team this Winter 2027 term.

Thank you for considering my application.

Sincerely,

Mandeep Singh
