Amazon  
Toronto, ON

## **Re: ML Systems Software Development Engineer Intern, Annapurna Labs**

Dear Hiring Team,

I am excited to apply for the ML Systems Software Development Engineer Intern position at Amazon Annapurna Labs. As a third-year Computing Science co-op student, I have direct, hands-on experience building and operating a production AI platform, and I would welcome the opportunity to bring that experience to Annapurna Labs' machine learning systems work.

As Co-Founder and Software Engineer at InferenceSaver, I co-developed a production AI API gateway and multimodal generation platform providing unified access to language, image, video, music, and voice models for 129 registered users, building the backend workflows and model integrations behind it — including normalizing request/response handling across many different model providers. I have also contributed since its early days to AgentMemory, an open-source persistent memory layer for AI coding agents that has grown to 28,275+ GitHub stars and is ranked #1 on real-world memory benchmarks.

At BecomeAfish, I engineered backend workflows and automation at production scale, and my internship with the City of Merritt gave me additional experience documenting and troubleshooting production systems at an enterprise scale. Together, this gives me both practical ML systems experience and the engineering discipline to ship it reliably.

I would welcome the opportunity to discuss how my applied AI/ML systems experience can contribute to your team this term.

Thank you for considering my application.

Sincerely,

**Mandeep Singh**
