Hiring Team

Bree

Toronto, ON

Re: Machine Learning Engineering, Intern

Dear Hiring Team,

I am excited to apply for the Machine Learning Engineering Intern position at Bree. As a third-year Computing Science co-op student, I have direct, hands-on experience building and operating a production AI platform, and I would welcome the opportunity to bring that experience to Bree's consumer finance products.

As Co-Founder and Software Engineer at InferenceSaver, I co-developed a production AI API gateway and multimodal generation platform serving 129 registered users, building the backend workflows, model integrations, and payment infrastructure behind it — including diagnosing and fixing a Stripe payment idempotency defect, exactly the kind of correctness-critical engineering that matters when real money is involved. I have also contributed since its early days to AgentMemory, an open-source persistent memory layer for AI coding agents that has grown to 28,275+ GitHub stars.

At BecomeAfish, I built and launched a booking and payments platform processing nearly CAD \$5K within two months of launch, and my internship with the City of Merritt gave me additional grounding in enterprise systems and technical troubleshooting.

I would welcome the opportunity to discuss how my applied AI/ML and consumer-facing fintech experience can contribute to your team.

Thank you for considering my application.

Sincerely,

Mandeep Singh
