Burnaby, BC

Re: Software Engineering Co-op (Hybrid)

Dear Hiring Team,

I am excited to apply for the Software Engineering Co-op position at Kardium. As a third-year Computing Science co-op student, I bring hands-on experience building and operating production software, and I am drawn to Kardium's mission of engineering technology that directly improves patient outcomes, where correctness and reliability are non-negotiable.

At BecomeAfish, where I am Co-Founder and Technical Lead, I designed and built a full booking and payments platform, engineering geographic matching logic, role-based portals, and automated backend workflows for payroll and reconciliation. At InferenceSaver, I worked across the stack on a production AI API gateway, including diagnosing and fixing a payment-processing idempotency defect affecting live customer transactions — the kind of careful, correctness-first engineering that matters in medical device software.

My role as Systems Analyst Intern with the City of Merritt sharpened my troubleshooting and documentation skills, including writing a full REST API runbook through hands-on curl and PowerShell testing. I bring a practical, detail-oriented approach to engineering work.

I would welcome the opportunity to discuss how my software development background can contribute to your team this January 2027 term.

Thank you for considering my application.

Sincerely,

Mandeep Singh
