Re: AI Engineer Intern (Summer 2027)

Dear Hiring Team,

I am writing to apply for the AI Engineer Intern position with EA's Creative Innovations team in Vancouver. Applying machine learning to character deformation, blendshapes, and landmark tracking, then making it usable inside artist tools like Maya and Houdini, is exactly where I want to grow: turning models into dependable production pipelines.

At InferenceSaver, I co-founded a production AI platform integrating image, video, music, voice, and language models that reached 2.7K active site users in 2026. I built the services, model integrations, and job workflows behind it, and restored integrations used for 88 production generation jobs, so I understand the gap between a model that works and a pipeline that artists can rely on.

Using AI developer agents for coding, testing, and automation is part of my daily workflow, and I help build them: I contribute to AgentMemory, an open-source memory layer for AI coding agents with 29.7K+ GitHub stars. I also built Preflight, which drives Playwright and Amazon Nova models on AWS to evaluate rendered output from screenshots and DOM evidence. I package and deploy with Docker and Git, and I am deepening my PyTorch, 3D geometry, and linear algebra skills to work on deformation models directly.

I am available full-time for the 16-week Summer 2027 internship and expect to graduate in April 2028. I would welcome the opportunity to help EA's artists build more expressive characters. Thank you for considering my application.

Sincerely,

Mandeep Singh
