Re: 2027 Capital Markets, Global Equities, AI Engineer (16 Months, Co-op)

Dear Hiring Team,

I am writing to apply for the 2027 Capital Markets, Global Equities, AI Engineer Co-op with RBC's Algo Research team. Applying machine learning to trade execution, where models are judged by measurable outcomes rather than demos, is the kind of disciplined, data-driven engineering I want to build my career on, and a 16-month term from May 2027 to August 2028 would let me contribute to real research.

At InferenceSaver, I co-founded a production AI gateway and multimodal generation platform that reached 2.7K active site users and 43K tracked events in 2026. I built the Python and TypeScript services, databases, and integrations behind it, and I learned to treat correctness as non-negotiable: I traced a payment idempotency defect affecting 8 of 14 checkouts by reconciling transaction records against application state, then implemented retry-safe writes.

I am comfortable working with large datasets and Unix environments. I built Generic Alternatives on PostgreSQL, Docker, and background job queues for structured data processing, and I contribute to AgentMemory, an open-source TypeScript project with 29.7K+ GitHub stars spanning session recording and semantic retrieval. Coursework in operating systems and computer networks gives me the systems foundations the role lists, and I am actively building depth in PyTorch, scikit-learn, pandas, and the statistics behind feature and loss-function design.

Running two products has also taught me to explain technical tradeoffs to non-technical partners clearly. I would welcome the opportunity to work alongside RBC's traders and researchers on AI-driven execution. Thank you for considering my application.

Sincerely,

Mandeep Singh
