Hiring Team

General Dynamics Mission Systems–Canada (Software Engineering Developer)

Calgary, AB

Re: Co-op Winter 2027 - Software Engineering Developer - 16-Months

Dear Hiring Team,

I am writing to apply for the Co-op Winter 2027 - Software Engineering Developer (16-Months) position at General Dynamics Mission Systems-Canada. As a third-year Computing Science co-op student at Thompson Rivers University, I bring a strong software engineering foundation and a track record of building and shipping reliable, production-grade systems, and I'm drawn to the longer 16-month term as a chance to make a deeper contribution to your team.

Through BecomeAfish and InferenceSaver, I have built and maintained backend systems that must behave correctly and consistently under real usage: automated payroll and reconciliation workflows, webhook-driven integrations, and payment processing where I diagnosed and fixed an idempotency defect affecting live transactions. This correctness-focused, systems-level thinking is directly transferable to mission-critical software.

My internship with the City of Merritt further developed my ability to work methodically through complex technical systems, including documenting a full REST API runbook through direct testing and managing 163 IT tickets.

I would welcome the opportunity to discuss how my software engineering background could contribute to your team this Winter 2027 term.

Thank you for considering my application.

Sincerely,

Mandeep Singh
