Re: Software Engineering Intern

Dear Hiring Team,

I am applying for the Software Engineering Internship at Veeda AI. Building the data tooling and visualization systems that let a research team move faster is the kind of work I want to do: real repositories, real data, and a tool the team keeps using after I leave.

At InferenceSaver, I co-founded a production AI gateway and multimodal generation platform that reached 2.7K active site users and 43K tracked events in 2026. I built the backend workflows, model integrations and job pipelines behind it, and when a Stripe idempotency defect broke 8 of 14 completed checkouts, I traced it and shipped retry-safe writes. At BecomeAfish, I built a booking and payments platform with role-based portals, eight automated workflows and analytics that tracked 4,967 pageviews over 61 days.

AI is part of how I work every day, and I help build the tools for it: I contribute to AgentMemory, an open-source memory layer for AI coding agents with 29.7K+ GitHub stars. I also built Preflight, a multimodal scanner that combines source-code context, DOM audits and responsive screenshots. I am comfortable with object-oriented languages including TypeScript, Java and Python, and with Docker, Git and CI/CD.

I expect to graduate in April 2028 and would welcome the chance to ship a tool your data team and researchers rely on. Thank you for considering my application.

Sincerely,

Mandeep Singh
