Re: Software Developer Embedded Systems I (Co-op)

Dear Hiring Team,

I am writing to apply for the Software Developer Embedded Systems I (Co-op) position at Cisco. As a third-year Computing Science co-op student at Thompson Rivers University, I'm drawn to the chance to work closer to the hardware layer at a company whose infrastructure underpins so much of the internet.

As Systems Analyst Intern with the City of Merritt, I worked directly with servers and hardware, including close-to-metal specification work, alongside device deployment, hardware provisioning, and low-level system configuration across 163 IT tickets. I'm also proficient in Rust and C, languages I've worked with directly for systems-level programming.

As Co-Founder of InferenceSaver and BecomeAfish, I've built and operated production software where correctness and reliability under real usage were non-negotiable, including diagnosing and fixing a Stripe webhook idempotency defect affecting live transactions. I'm eager to bring that same rigor to embedded software development.

I would welcome the opportunity to discuss how my systems background, low-level programming experience, and engineering discipline could contribute to your team.

Thank you for considering my application.

Sincerely,

Mandeep Singh
