Hiring Team
IBM (Agentic AI Engineer)
Toronto, ON

Re: Agentic AI Engineer Developer Intern (January 2027 - 4 Months - Toronto)

Dear Hiring Team,

I am writing to apply for the Agentic AI Engineer Developer Intern (January 2027 - 4 Months - Toronto) position at IBM. As a third-year Computing Science co-op student at Thompson Rivers University, agentic AI is an area I'm already genuinely active in, not just interested in.

I'm an early contributor to AgentMemory, an open-source agentic memory project that has grown to 28,275+ GitHub stars, giving me direct, hands-on exposure to how agentic systems are designed and built in the open.

As Co-Founder of InferenceSaver, I've built and operated a live AI API gateway and multimodal generation platform serving 129 registered users and processing \$5.6K+, including model integration and diagnosing a subtle Stripe webhook idempotency defect.

I would welcome the opportunity to discuss how my agentic AI background could contribute to your team this term.

Thank you for considering my application.

Sincerely,

Mandeep Singh
