Hiring Team
IBM (Machine Learning Developer)
Toronto, ON

Re: Machine Learning Developer Intern / Stagiaire développeur en apprentissage automatique

Dear Hiring Team,

I am writing to apply for the Machine Learning Developer Intern position at IBM. As a third-year Computing Science co-op student at Thompson Rivers University, I'm excited by the chance to build ML-powered software at IBM's scale.

As Co-Founder of InferenceSaver, an AI API gateway and multimodal generation platform, I've built and operated the full stack behind a live AI product serving 129 registered users and processing \$5.6K+, including model integration and API design.

As Co-Founder of BecomeAfish, I've also shipped a second production platform from scratch, giving me a well-rounded technical foundation across both AI-specific and general full-stack engineering. My internship with the City of Merritt added enterprise IT grounding.

I would welcome the opportunity to discuss how my applied ML experience could contribute to your team.

Thank you for considering my application.

Sincerely,

Mandeep Singh
