Re: Software Engineer Intern (Winter 2027)

Dear Hiring Team,

I am writing to apply for the Software Engineer Intern position at Harvey for Winter 2027. As a third-year Computing Science co-op student at Thompson Rivers University, I'm drawn to the chance to build AI-powered software at a company applying LLMs to real, high-stakes professional work.

At InferenceSaver, I co-founded and built a production AI API gateway providing unified access to language, image, video, music, and voice models for 129 registered users, including backend workflows, authentication, and model integrations. I diagnosed and fixed a Stripe idempotency defect affecting real production checkouts, the kind of correctness discipline AI products handling professional work require.

I am also an open source contributor to AgentMemory, a persistent memory layer for AI coding agents that has grown to 28,275+ GitHub stars, and I'm a daily user of Claude Code for AI-assisted development.

I would welcome the opportunity to discuss how my hands-on experience building production AI systems could contribute to your team.

Thank you for considering my application.

Sincerely,

Mandeep Singh
