Re: Software Engineer, Backend Intern (Winter 2027)

Dear Hiring Team,

I am writing to apply for the Software Engineer, Backend Intern position at StackAdapt for Winter 2027. As a third-year Computing Science co-op student at Thompson Rivers University, I'm drawn to the chance to work on backend systems at scale.

At InferenceSaver, I co-founded and built a production AI API gateway providing unified access to language, image, video, music, and voice models for 129 registered users, including the backend workflows, authentication, and model integrations behind it. I diagnosed and fixed a Stripe idempotency defect affecting real production checkouts, implementing retry-safe payment writes.

At BecomeAfish, I engineered backend workflows including geographic instructor matching and automated eight operational workflows end to end on a PostgreSQL-backed system. As Systems Analyst Intern with the City of Merritt, I built a documented REST API runbook through hands-on curl and PowerShell testing.

I would welcome the opportunity to discuss how my hands-on backend engineering experience could contribute to your team.

Thank you for considering my application.

Sincerely,

Mandeep Singh
