Re: Machine Learning Engineer Intern (Winter 2027)

Dear Hiring Team,

I am writing to apply for the Machine Learning Engineer Intern position at StackAdapt for Winter 2027. As a third-year Computing Science co-op student at Thompson Rivers University, I'm drawn to the chance to work on ML systems serving real advertising decisions at scale.

At InferenceSaver, I co-founded and built a production AI API gateway providing unified access to language, image, video, music, and voice models for 129 registered users, including the model integrations and generation pipeline behind it. I also restored music and voice integrations used for 88 production generation jobs after diagnosing a payment defect blocking them.

I am also an open source contributor to AgentMemory, a persistent memory layer for AI coding agents that has grown to 28,275+ GitHub stars, giving me exposure to production-grade AI tooling development beyond my own projects.

I would welcome the opportunity to discuss how my hands-on experience building production AI systems could contribute to your team.

Thank you for considering my application.

Sincerely,

Mandeep Singh
