Re: Software Development Engineer Intern (Winter 2027)

Dear Hiring Team,

I am writing to apply for the Software Development Engineer Intern position at Workday for Winter 2027. As a third-year Computing Science co-op student at Thompson Rivers University, I'm drawn to the chance to work on enterprise-scale software that organizations run their operations on.

At BecomeAfish, I built and launched a production booking and payments platform supporting 108 registered accounts and 133 scheduled lessons, engineering role-based portals and automating eight operational workflows end to end. As Systems Analyst Intern with the City of Merritt, I've managed 163 IT tickets and built a documented REST API runbook, giving me a working sense of how enterprise systems serve real operational needs.

At InferenceSaver, I co-founded and operated a production AI API gateway serving 129 registered users, including backend workflows, authentication, and payment infrastructure, experience building and maintaining systems that have to just work.

I would welcome the opportunity to discuss how my production engineering background could contribute to your team.

Thank you for considering my application.

Sincerely,

Mandeep Singh
