Toronto, ON

Re: Machine Learning Research Intern

Dear Hiring Team,

I am writing to apply for the Machine Learning Research Intern position at M31 AI. As a third-year Computing Science co-op student at Thompson Rivers University, I'm drawn to the chance to work at the intersection of ML research and real production systems.

As Co-Founder of InferenceSaver, an AI API gateway and multimodal generation platform, I've built and operated the full stack behind a live AI product serving 129 registered users and processing \$5.6K+, including model integration and API design. I personally diagnosed and fixed a Stripe webhook idempotency defect that had silently under-credited 8 of 14 checkouts, the kind of rigor research-adjacent engineering demands.

I'm also an early contributor to AgentMemory (28,275+ GitHub stars) and built a public project combining procedural generation with a genetic-algorithm engine, both of which reflect a genuine interest in how learning systems behave in practice, not just in theory.

I would welcome the opportunity to discuss how my applied AI experience could contribute to your team.

Thank you for considering my application.

Sincerely,

Mandeep Singh
