Re: Test Developer Co-op

Dear Hiring Team,

I am writing to apply for the Test Developer Co-op position at Visier Solutions. As a third-year Computing Science co-op student at Thompson Rivers University, I bring hands-on experience finding, diagnosing, and fixing real defects in production software, and I am drawn to the rigor that testing people-analytics software at scale demands.

At InferenceSaver, I diagnosed a Stripe payment idempotency defect that had silently affected 8 of 14 completed checkouts, tracing it through the full webhook processing path, implementing retry-safe writes, and reconciling the affected accounts. That experience taught me to think systematically about edge cases, race conditions, and what a system does under real-world retry and failure conditions, exactly the mindset a test developer needs.

My internship with the City of Merritt sharpened this further: I documented a full CityWide REST API runbook through direct curl and PowerShell testing, and resolved 135 of 163 assigned IT tickets, developing a methodical approach to isolating and verifying fixes. At BecomeAfish, I've also had to test and validate my own full-stack platform end-to-end as the sole engineer responsible for its correctness.

I would welcome the opportunity to discuss how my debugging and testing experience can contribute to your team this Winter 2027 term.

Thank you for considering my application.

Sincerely,

Mandeep Singh
